

Complete Name:	Cabusao, Anthony Carl T.
Course:	GAMDES1
Section:	IAC1
Date:	August 25, 2026

a. Which editor panel was least familiar to you, and how did you work out what it does?

- The Inspector panel was the least familiar to me. I learned that it is used to view and edit the properties of the selected node by exploring its available settings.

b. What installation, setup, or Git issue did you or your pair- partner run into, and how did you resolve it?

- I encountered a Git merge conflict in the .gitignore file when trying to push my project to GitHub. I resolved it by fixing the conflicting contents, saving the file, committing the changes, and pushing again.

c. In your own words, what is the relationship between a node, a scene, and the scene tree?

- A node is an individual object or component in Godot. A scene is made up of one or more nodes, while the scene tree shows how those nodes are arranged and connected in a hierarchy.
